Environmental Policy

Environmental Policy 2009

Caring for the environment is vital to The Print Academy and our commitment to such is that our plan is continuously managed by an experienced waste management company.

At The Print Academy we recognise that over a period of time, waste products from our industry may have an effect on our environment and surroundings and this is why we take our responsibilities to the environment seriously when disposing of and recycling our waste products.

We take seriously our responsibility for the care and safe disposal of liquid and dry waste that cannot be recycled and put emphasis on care of the environment and atmosphere.

We shall:

- Recycle all aluminum plates and paper waste.
- Segregate waste produced into separate waste polices for recycling or safe disposal.
- Constantly refine processes that only use essential resources in order to produce less waste.
- Produce pre-press production direct to plate, eliminating film, chemicals and proofing paper waste.
- Recycle all used ink cans in conjunction with Caiman Inks recycling policy.
- Use water based coatings in place of solvent based sealers.
- Employ only certified waste carriers and disposal sites.
- Print on unbleached paper products and use paper and packaging suppliers who operate sustainable forest management policy.
- Operate our presses at alcohol levels below 5% in accordance with our environmental policy.
